

Attachment for Zoom Booms

Attachment for Zoom Booms - In the past ten years, Skyjack was acquired by the Linamar Corporation, a leading maker of precision machined components, assemblies and modules. At present, Skyjack has production plants in United States, Canada and Hungary with extra support offices in Asia and Europe.

The Skyjack trademark became the industry leader for aerial hoist equipment by combining features like quality, durability and serviceability, making their scissor lifts recognized all around the world for product efficiency and reliability. Skyjack manufactures numerous different self-propelled aerial platform lifts for its international customer base. Their elevated work heights reach nearly 56 feet. The company's current Boom lift truck model series has telescopic booms ranging from 45 feet to 71 feet. Skyjack has plans to further extend their boom hoist product line. The business remains a leading player in the industry adapting rapidly to the continuously evolving requirements of their clients.

Lately, Skyjack bought Carelift Equipment in August 2007 and Volvo's Material Handling Equipment in order to try to expand their Telehandling product offering. The resulting VR series telehandlers and Zoom Boom along with the additional manufacturing ability further guarantees the company's growth and success.

Skyjack is proud of their devotion to engineer reliable lift solutions. Their products are produced, supported and advertised all around the globe.
