

Carriage Roller

Carriage Roller - Carriage rollers are specially designed bearings that are utilized on lift masts so as to help them work in tough environmental surroundings. Lift masts are frequently subjected to shocks, oscillations, high dynamic and vibrations and static loads. This equipment is regularly exposed to environmental influences like for example cold, heat, dust, contamination, aggressive ambient air and moisture. Therefore, the lift masts' guidance arrangements need to be specifically robust and have a particular high load carrying capability.

In order to help compete in lots of various environmental conditions, carriage rollers were designed for various lift masts. While having the ability to handle a specifically high load carrying capacity, these bearings provided an economical operational security for the guidance arrangement of the lift masts.
